

Day 1: The Ship Has Sunk

Day 1 — the ship sank. Today we build a new one from scratch: Linux fundamentals and your first containers.

The Schedule

- **09:00 - 09:15** | Welcome & Storytime
 - **09:15 - 10:30** | Lab 00: Building Your Vessel (Create the Ubuntu VM)
 - **10:30 - 10:45** | Break
 - **10:45 - 12:00** | Lab 00, cont.: Bootstrap & Verify (setup-client.sh)
 - **12:00 - 01:00** | Lunch
 - **01:00 - 01:45** | Lecture: The Wreckage (Linux Basics & Intro to Containers)
 - **01:45 - 03:00** | Lab 01: The First Raft (Building your first Container)
 - **03:00 - 03:15** | Break
 - **03:15 - 04:00** | Lecture: Into the Deep (Kubernetes Pods)
 - **04:00 - 05:00** | Lab 02: Paddling Out (Generators, Diagnostics & The Scavenger Hunt)
-

⚓ The Boatswain's Cheat Sheet

Containers (Docker)

- **Build an Image:** `docker build -t <image-name> .`
- **Run a Container:** `docker run -d -p 8080:80 <image-name>`
- **List Running Containers:** `docker ps`
- **Push to Registry:** `docker push <registry>/<image-name>`

Kubernetes (The Orchestrator)

- **Claim Your Land (Namespace):** `kubectl create namespace <your-name>`
 - **Set Default Context:** `kubectl config set-context --current --namespace=<your-name>`
 - **Generate a Pod YAML:** `kubectl run my-pod --image=nginx --dry-run=client -o yaml > pod.yaml`
 - **Apply YAML:** `kubectl apply -f pod.yaml`
 - **Check Status:** `kubectl get pods`
 - **View Logs:** `kubectl logs my-pod`
 - **Board the Pod (Exec):** `kubectl exec -it my-pod -- /bin/sh`
-

Captain's Log (Notes)

(Jot down your survival strategies here...)
